JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for dynamic vertical gradient freeze 127

Characterization
– by various methods
– – of silicon melt 323
Computer simulation
– of composition profile 40
– of Czochralski growth 157, 450, 461, 534, 627
– of dopant concentration in silicon 343, 372, 381
– of global model of liquid encapsulated Czochralski 517, 524
– of interface demarcation 293
– of liquid encapsulated Czochralski melt flows of indium phosphide 510
– of melt convection 442
– of metalorganic vapor phase epitaxy of III–V compounds 660
– of silicon melt flow 487
– of software for modeling 698
– of thermocapillary convection 660
– of time dependent Czochralski 468
– of void nucleation 353
Constitutional supercooling
– of benzil 127
Convection 127, 157, 372, 381, 410, 433, 442, 450, 477, 487, 497, 517, 524, 566, 578, 587, 597, 638, 648

Device characterization
– electronic materials 40
– lasers 1
– quantum wells 22
– with saw tooth bandgap 9
Diffusional control
– of Coriolis convection 578
Dissolution
– of surfaces 263, 274

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 40
– reactive ion 1
Eutectic growth
– of faceted lamellar structures 315

Hydrodynamics, see Convection

Kinetics
– of different faces of germanium oxide 212
– of doping 167
– of growth 113, 136, 212, 238, 284, 334, 604, 680
– of interface control 280, 680
– of nucleation 61, 113, 136, 238, 255, 274

Lasers, see Device characterization
Lasers, crystals for
– chromium-doped YAG 81
– harmonic generation 255
– lithium niobate 94, 101
– nonlinear optics 229
– rare-earth titanium niobate 73

Melt growth technique
– by Bridgman–Stockbarger method
– – of bismuth 293
– – theory
– – – of buoyancy driven convection 422, 433
– – – of dopant transport in strong magnetic field 401
– by Czochralski method
– – of gallium arsenide 517
– – of indium phosphide 510
– – of rare-earth titanium niobate 73
– – of silicon 334, 343, 353, 363, 442, 450, 461, 477
– – theory
– – – of flow mode transitions 305
– – – of global simulation 517, 524
– – – of internal radiation 157, 551
– by floating zone method
– – of bismuth germanate 105
– – of chromium-doped YAG 81
– – theory of vibrations controlling growth 648
– by horizontal Bridgman 587

– by vertical gradient freeze method 127, 560
– by zone melting
– – of silicon 372, 381
– – theory
– – – of dopant distribution 94
– – – of shaped crystal growth 615
Microgravity, growth under
– of bismuth germanate 105
– theory of Coriolis forces 578
– vibrations 648
Morphological stability
– of germanium oxide 212

Nucleation
– of carbon-rich aggregates 185
– of diamond 198
– of grown-in defects in silicon 334, 353, 363
– of vacancy clusters 61
Numbers
– Bond 615
– Damköhler 113
– Grashof 157, 388, 433, 450, 477, 524, 534, 543, 578, 638
– Hartman 401, 433, 477
– Marangoni 534
– Peclet 401, 578
– Prandtl 388
– Rayleigh 305, 477, 597
– Reynolds 450, 497, 638
– Schmidt 597
– Taylor 388, 410

Phase diagram
– of carbontetrabromide–hexachloroethane 315
– of rare-earth titanium niobate 73

Quantum wells, see Device characterization

Solution growth technique
– by chemical liquid homogeneous precipitation
– – of gamma-manganate 280
– by flux method
– – of potassium titanyl 85
– by low temperature method
– – of germanium oxide 212
– – of L-arginine phosphate monohydrate 263, 274
– – of monomethylhydrazin 238, 248
– – of potassium dihydrogen phosphate 255, 497
– – of 2-amino-5-nitropyridinium dihydrogenphosphate and dihydrogenarsenate 229
– by top seeded solution growth
– – of magnesium silicate (ortoenstatite) 206
– by traveling heater method
– – of cadmium telluride 566
– by ultracentrifugation
– – of proteins 113
Statistical mechanics, molecular theory
– of surface angle transition 136
Stefan problem or moving boundary problem
– of horizontal Bridgman 587
– of melt 388
Superlattices, multilayers
– of silicon/silicon carbon 185
– of III–V compounds 22
Surface energy, determination
– of angle transition 136
Surface structure
– of etched surfaces 263
– of silicon (211) 54

Thin film growth
– by atomic layer molecular beam epitaxy
– – of aluminum phosphide 15
– by gas source molecular beam epitaxy
– – of gallium nitride 27
– by hot wall epitaxy
– – of zinc telluride 47
– by liquid phase epitaxy
– – of indium gallium arsenide antimonide 34
– by molecular beam epitaxy
– – of indium phosphide 22
– – of zinc selenide 40
– – of zinc sulphide selenide 40
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – theory of growth 670, 680
– – through metalorganic chemical vapor deposition
– – – of cadmium zinc telluride 177
– – – of copper 691
– – – of indium gallium aluminum arsenide 9
– – – of indium phosphide 1
– – – of silicon/silicon carbon 185
– – – of strontium barium niobate 220
– – – of yttria 680
– – – of zinc selenide 167
– – – of zirconia 680
– – – theory of growth 660
– – through metalorganic chemical vapor deposition, photo-assisted
– – – of zinc selenide 167
– – through plasma-enhanced chemical vapor deposition 198

Vapor growth technique
– by chemical transport
– – of epsilon-caprolactam 284
Vapor–liquid–solid growth
– of germanium oxide 212
